

E-Evolution

A VIRTUAL REALITY GAME TO ENVISION A HIGHLY TECHNOLOGICAL LIFE AND THE CHANGES IT WILL BRING TO HUMANITY.

INDIVIDUAL WORK
2022/12

This is a simulation game in which the character lives in a future electronic age where his life is surrounded by electronic devices and his body has undergone some evolution due to the external environment.

Physical indicators

Indicator	Current Status	Historical Status
Sleep quality	Normal	Normal
Eye Health	Good	Good
Neck Muscles	Normal	Normal

BACKGROUND

In my friend's photos documenting my life, I find myself constantly looking down at my device, but I never realize it.

SELF ANALYSIS

Life surrounded by electronic devices has turned me into a "PHUBBER".

CONCEPT

According to the data and analysis of the current situation, I speculate that my body changes belong to evolution.

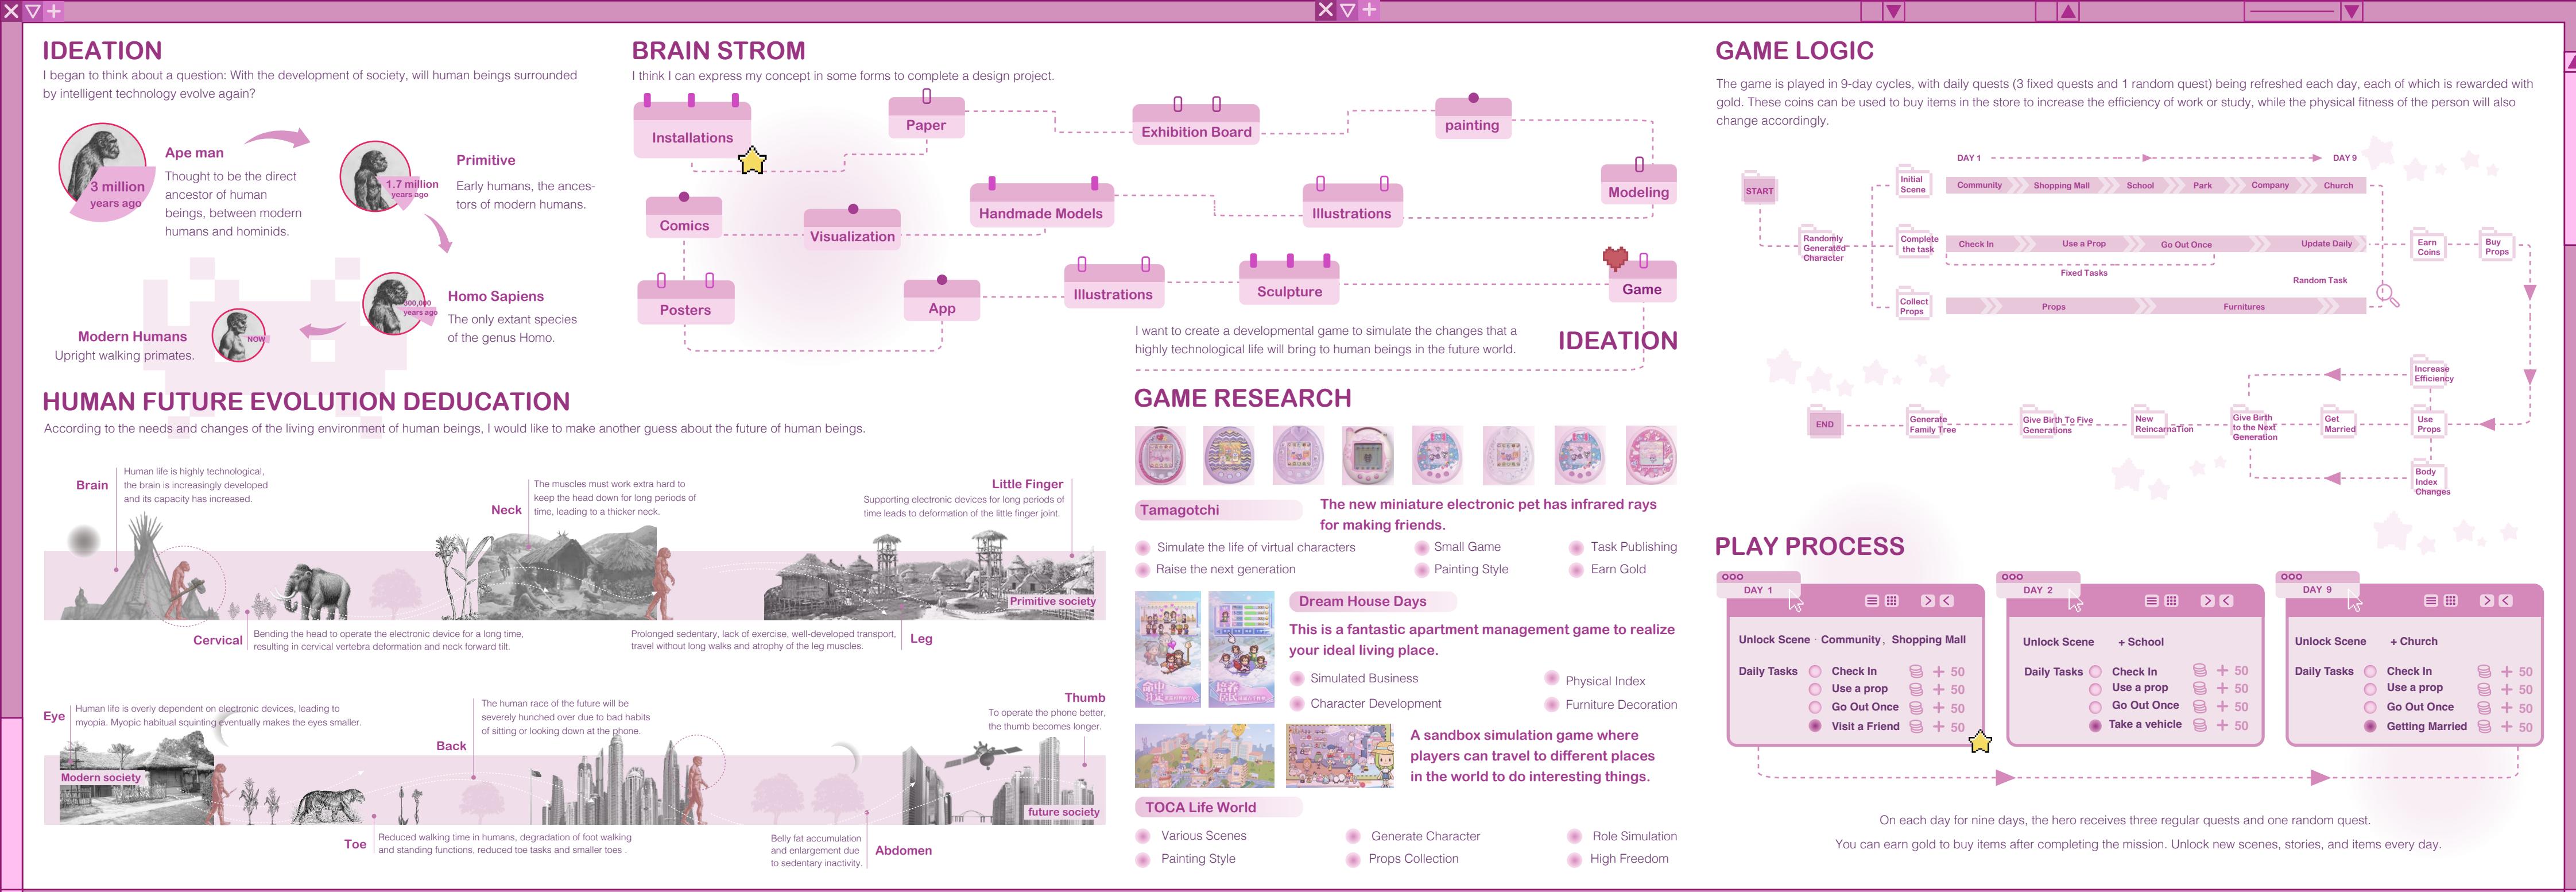

RESEARCH

According to research, every change of human beings is due to changes in survival needs caused by changes in the external environment.

DEFINITION

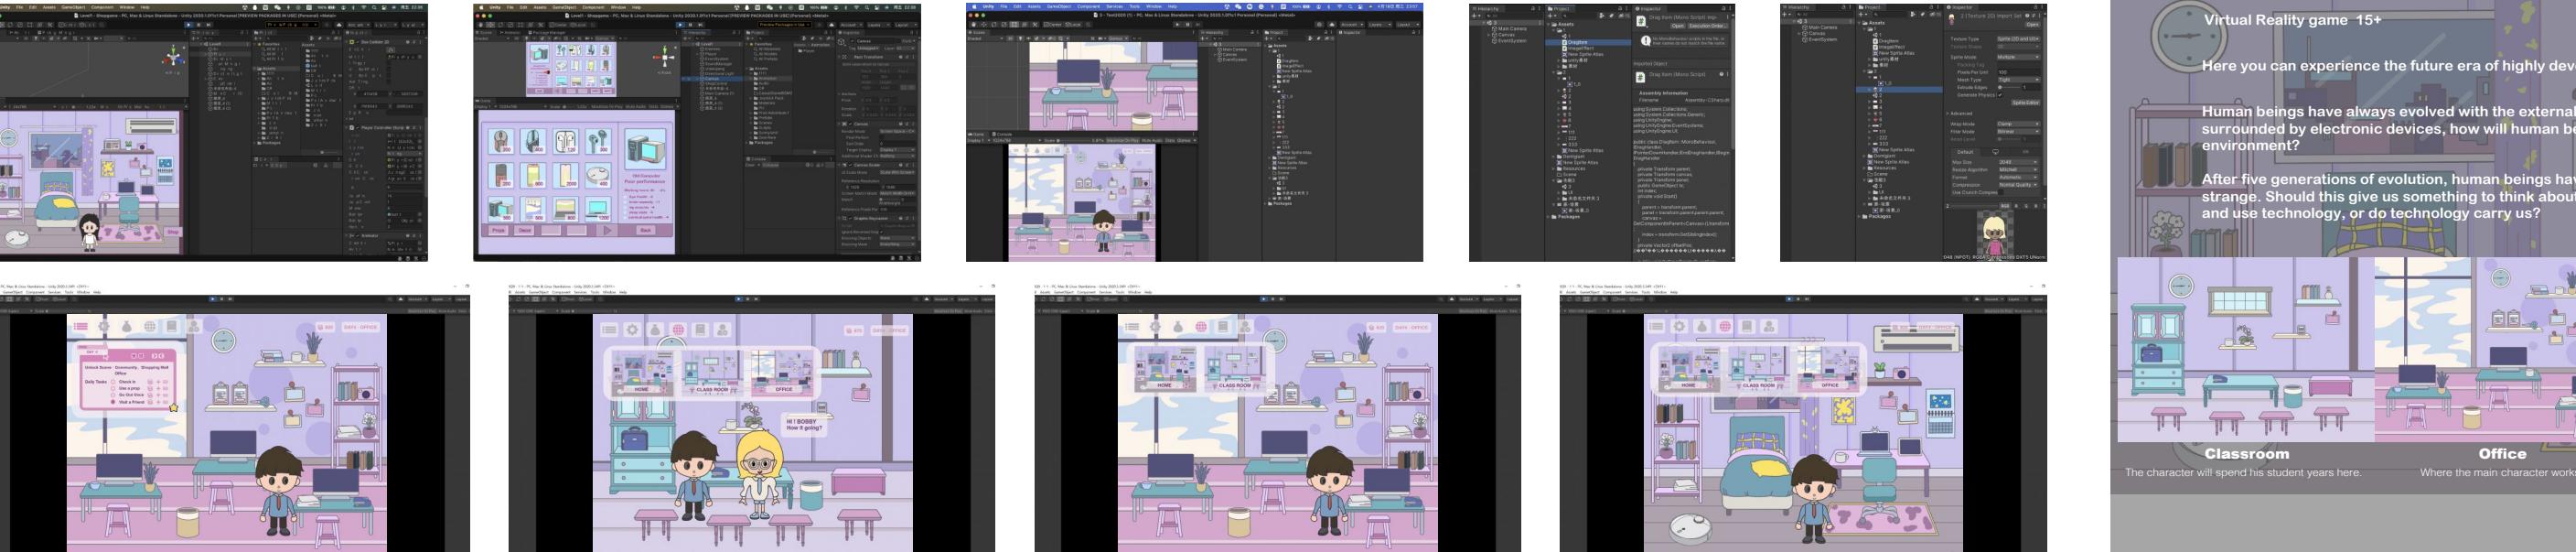

From a medical point of view, the changes in the human body are mainly divided into three types.

- Lesion**: A person is out of the healthy range when many indicators are well above or below normal.
- The Huge Brain**: Disease causing cellular or physiological changes.
- The Huge Heart**: Pathological changes can occur when healthy cells, tissues and organs are affected by various factors.
- Degenerative**: The simplification of certain structures of an organism and the diminution or complete disappearance of its functions.
- The Missing Organs**: In the course of evolution, the function of an organism is weakened or even completely eliminated.
- Evolution**: Evolution occurs when genetic variation becomes more common or no longer rare in a population.
- Shorter Intestines**: Because humans can digest food in a relatively short intestine.

EFFECT DISPLAY

E - Evolution
Virtual Reality game 15+

Here you can experience the future era of highly developed electronic information life.

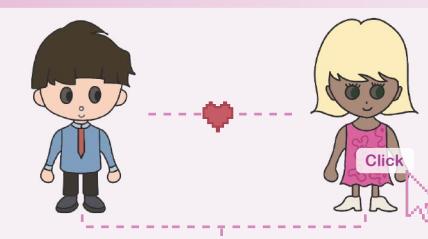

Human beings have always evolved with the external environment. In this era surrounded by electronic devices, how will human beings evolve because of the environment?

After five generations of evolution, human beings have changed from familiar to strange. Should this give us something to think about in our current life? Do we create and use technology, or do technology carry us?

FAMILY TREE

1 GEN BOBBY & LULA

2 GEN JASMINE & ROBIN

2 GEN DORA & DOBBY

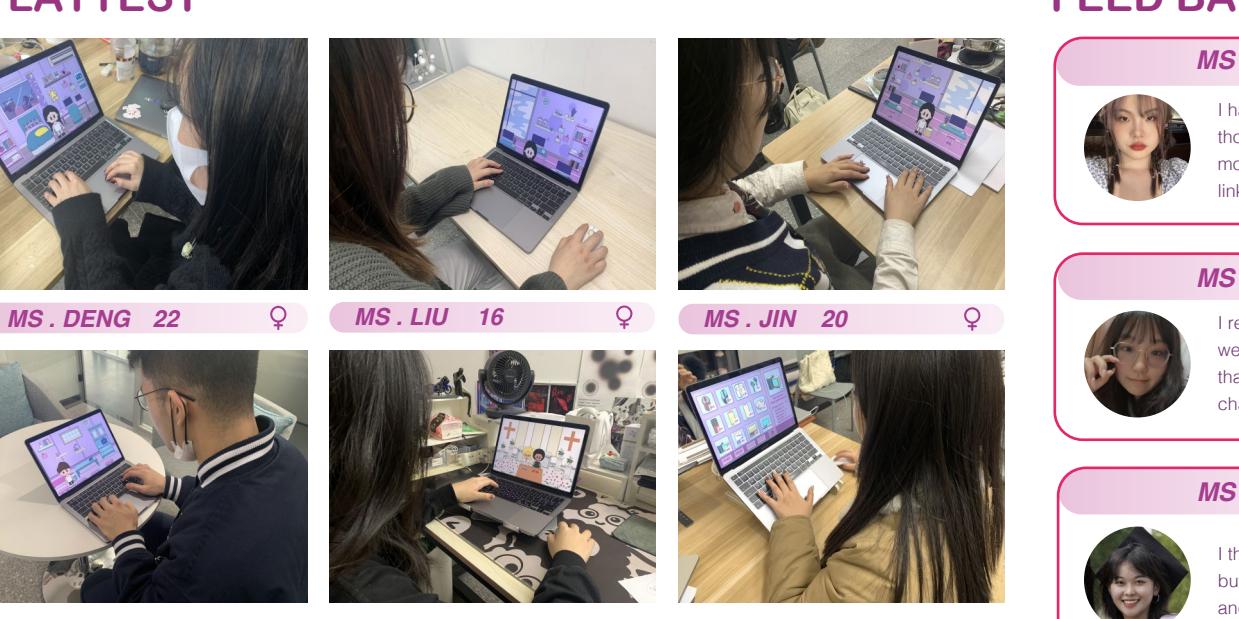

2 GEN DIEGO & BARBARA

2 GEN MIMI

PLAYTEST

FEED BACK

MS . DENG **MS . LIU**

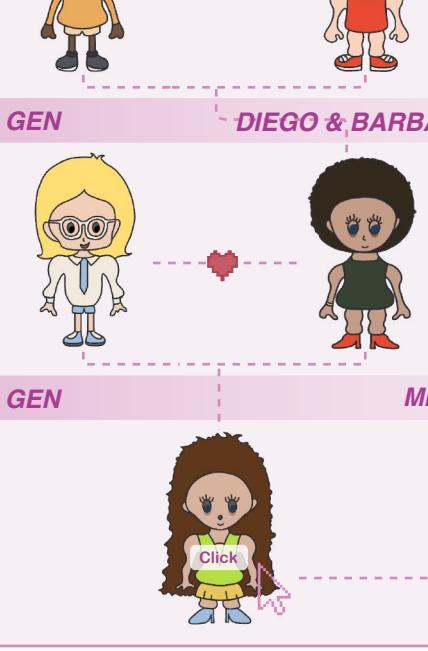

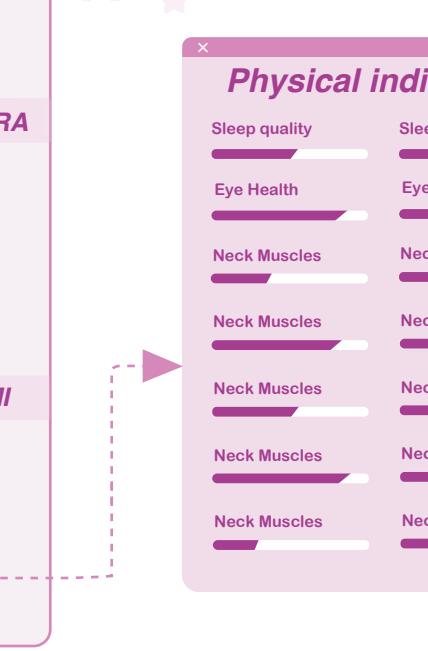

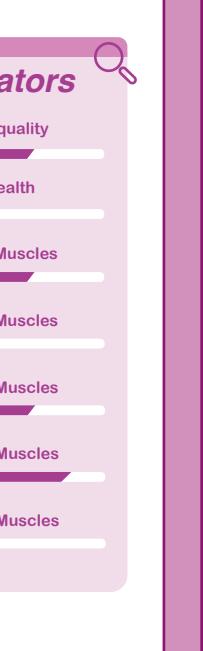

I have to say that this game has given me a lot of thought and I think it's fun. But I think some more interaction could be added to enhance the link between people and the game.

MS . JIN **MR . LIANG**

I really liked the setting of the game, and there were a lot of novel mechanics during the game that made me want to explore and see how the characters would eventually change.

MS . XIONG **MS . ZHANG**

I think it's fun to play games to stimulate thinking, but I don't think the connection between people and games is strong enough.
